

How to Set Up Your Stripe Account

Follow these simple steps to start accepting payments online.

1

Create Your Stripe Account

- Go to stripe.com and click "Start now"
- Sign up with your email address and create a password
- Check your inbox and click the verification link Stripe sends you

2

Activate Your Account (Required to receive real payments)

- Log in to your Stripe dashboard at dashboard.stripe.com
- Click "Activate your account" on the home screen
- Enter your business information: name, address, and phone number
- Provide your SSN (last 4 digits) or EIN if you have a registered business
- Add your bank account (routing number + account number) to receive payouts

NOTE

Your bank info is only used by Stripe to send you money. It is fully encrypted and secure.

3

Get Your API Keys

- In the Stripe dashboard, click "Developers" in the left sidebar
- Then click "API keys" (or go directly to: dashboard.stripe.com/apikeys)
- You will see two keys — you need to send me BOTH of them:

Publishable key

Starts with `pk_live_...` (safe to share)

Secret key

Starts with `sk_live_...` (share only with your developer — keep it private!)

4

Send the Keys to Your Developer

- Copy both keys from the Stripe dashboard
- Send them securely (WhatsApp, email, or private message)
- That's it! Your developer will handle the rest.

Before going live — Test Keys

Stripe also gives you TEST keys (`pk_test_...` / `sk_test_...`) that let your developer verify everything works before charging real cards. It's a good idea to send the test keys first, then the live keys once everything is confirmed.
